What is Koshiishi style moxibustion?

It is a style of Japanese direct moxibustion that is most known for its extremely calming effect and transformative clinical efficacy. By having a layer of herbal Shiunko cream between the moxa and the skin, Koshiishi style moxibustion is able to have direct contact with the patient and not scar.

Koshiishi is known to help with the following:

1. This technique of moxa often sends patients into a deep sleep. It is deeply relaxing, warming, and gentle.
2. Applicable to traditionally contraindicated areas (e.g. face, inflammation)
3. Suitable for all age groups, babies and elderly
4. Suitable for patients who have sensitive skin, eczema, and/or other skin inflammation conditions
5. This technique is also effective for issues such as musculoskeletal pain, digestive issues, gynecological conditions, auto-immune diseases, and many more.
